

Method Statement

Pav A & B

Product Description:

Liquid used as a marble protection.

Features

PAV-A and-B is a revolutionary treatment for 2 components, creating a three-dimensional network at the nanometer scale, repels dirt particles in this way cannot come into contact with the surface.

Benefits

Due to the hydrophobic properties of oleophobe and dirt such as grease, oil, limestone and other contaminants do not penetrate into the substrate of the surface and are then removed with ease, even without the use of abrasive media.

- Impressive ease of cleaning
- Even a permanent marker will be removed with ease

Where to apply:

- Flooring minerals • Marble floors
- Granite flooring
- Porcelain hard and shiny

How to apply:

Spray RP10 for the preparation of the floor on the desired surface to protect and then with a tissue extend in a circular movement till the surface becomes dry. Repeat where is necessary. Then apply PAV A must be applied first. No trespassing during the first coat. Wait 24 h before applying PAV B. After 24h from the application of PAV B the products give full protection.

Drying time: This depends on the fiber surface, the temperature and humidity.

Keep away from food for human or animal consumption and not allow to flow into soil, water ways or drainage systems.
